Volkswagen-backed PowerCo SE reaches significant milestone in St. Thomas gigafactory project

- **PowerCo COO Sebastian Wolf: "Site preparation, the first phase of Gigafactory St. Thomas, has been completed. We are now ready for the next stage on our path to the sustainable and responsible production of battery cells."**
- **North American entity of Volkswagen Group's battery company will be named PowerCo Canada Inc., headquartered in St. Thomas, Ontario**
- **Current activities include setting up local office in downtown St. Thomas, continuing local hiring and signing first servicing agreements with local providers**

Salzgitter/St. Thomas, Ontario, December 12, 2023 – Volkswagen Group-owned battery company PowerCo SE steps up its activities in Canada. Ramping up its cell production activities in Europe and North America, the site of its future cell gigafactory in St. Thomas, Ontario, is now prepared for groundbreaking and start of construction in 2024. Sebastian Wolf, Chief Operations Officer of PowerCo SE, said at an event on site: "We are fully on track. Site preparation, the first phase of Gigafactory St. Thomas, has been completed. We are now ready for the next stage on our path to the sustainable and responsible production of battery cells. PowerCo will be a reliable partner for the people in St. Thomas and Ontario."

The future PowerCo cell plant in St. Thomas, Ontario

St. Thomas is the company's first overseas gigafactory for cell manufacturing and will equip the Group brands' BEVs in the North American region with cutting-edge unified cells, a new technology designed for cost-efficient scale production.

St. Thomas will also be the largest PowerCo gigafactory to date with an annual

production capacity of up to 90 GWh in the final expansion phase. The planned investment of up to €4.8 billion / CAD\$ 7 billion by 2030 has the potential to create up to 3,000 highly skilled jobs at the factory along with thousands of indirect jobs within the region. Furthermore, the cell factory will be supplied with CO2-free energy.

PowerCo-COO Sebastian Wolf seized the opportunity to reveal the name of the new Canadian entity: PowerCo Canada Inc., headquartered in St. Thomas, Ontario, will steer all activities of the battery company in North America. Thereby, PowerCo complements the establishment of a Canadian EV battery supply chain and supports the 2030 Emissions Reduction Plan of the Canadian Government. On a local level, PowerCo will work closely with the province of Ontario and the city of St. Thomas, along with local colleges to prepare our Canadian labour force for the tasks and processes of the new industry.

Vic Fedeli, Ontario's Minister of Economic Development, Job Creation and Trade, commented: "This important step forward is a sign of the continued progress being made by PowerCo Canada Inc., working in tandem with support from the Government of Ontario. When completed, this gigafactory will represent a significant milestone in the end-to-end auto and EV battery supply chain growing across the province. We also welcome the news that PowerCo Canada Inc. has begun local hiring and setting up its resident office in St. Thomas. We will continue to monitor the progress of this project with eager anticipation."

Joe Preston, Mayor of the City of St. Thomas, speaking at the same occasion: "I'm excited that Volkswagen has selected St. Thomas to be a key part of the plan for North America as a hub for building the cars of the future. This investment by PowerCo is not only a game changer for Ontario's EV vision, but also a huge boost to our community and the hardworking families that call St. Thomas and Elgin County home. Our region will surely prosper from this for decades to come."

The cell factory with a projected start of production in 2027 is part of a larger plan that Volkswagen and PowerCo agreed upon with Canadian Prime Minister Justin Trudeau's government in August of 2022. The Memorandum of Understanding signed at the time focuses on battery value creation and raw material security in order to help promote e-mobility in the country.

The decision to expand PowerCo SE's cell production network to Canada is further proof of the ambitious growth strategy of the Volkswagen Group in North America. This includes the introduction of a broad portfolio of full-electric vehicles in the United States and Canada by 2030, the expansion of Electrify America's coast-to-coast charging network in the U.S. and Canada as well as the announcement of the return of the iconic Scout brand to deliver its first all-electric vehicles in 2026.

Current PowerCo activities include setting up the local office in downtown St. Thomas, continuing local hiring and signing the first servicing agreements with local providers such as the Canadian electricity transmission and distribution service provider Hydro One, Ontario-based Project Management Consultant Turner & Townsend and General Designer WSP. Further, the design for the expansion of local highway and road infrastructure is on track and the necessary environmental assessments have been initiated.

In order to set up robust supply chains and attract suitable additional suppliers to St. Thomas, a first webinar was hosted by the Ontario Ministry of Economic Development in close liaison with

the PowerCo procurement department. 500 participants were introduced to the PowerCo sourcing strategy, as well as location advantages and potentials.

The cell factory is being built over an area of around 370 acres (150 hectares), which corresponds to more than 210 soccer or football fields. The entire industrial and supplier park amounts to 1,500 acres (600 hectares). Its strategic location about 30 km south of London, Ontario, is at the heart of the Great Lakes Automotive Corridor and near major cities such as Toronto and Detroit. That gives PowerCo prime access to the regional research and innovation cluster, talented workforce, good transport infrastructure and established supply chains. Furthermore, the cell factory will be supplied with 100 % CO2-free energy.

About PowerCo

The Volkswagen Group is bundling global battery activities in the European company (SE) PowerCo. From Salzgitter, the company manages international factory operations, the further development of cell technology, and the vertical integration of the value chain. Looking ahead, further products such as major storage systems for the energy grid are planned. Since its launch in July 2022, PowerCo has decided three gigafactory locations with a total capacity of up to 200 GWh/year: Salzgitter in Germany, Valencia in Spain and St. Thomas in Canada.

About the Volkswagen Group:

The Volkswagen Group is one of the world's leading car makers, headquartered in Wolfsburg, Germany. It operates globally, with 115 production facilities in 19 European countries and 10 countries in the Americas, Asia and Africa. With around 676,000 employees worldwide. The Group's vehicles are sold in over 150 countries.

With an unrivalled portfolio of strong global brands, leading technologies at scale, innovative ideas to tap into future profit pools and an entrepreneurial leadership team, the Volkswagen Group is committed to shaping the future of mobility through investments in electric and autonomous driving vehicles, digitalization and sustainability.

In 2022, the total number of vehicles delivered to customers by the Group globally was 8.3 million (2021: 8.9 million). Group sales revenue in 2022 totaled EUR 279.2 billion (2021: EUR 250.2 billion). The operating result before special items in 2022 amounted to EUR 22.5 billion (2021: EUR 20.0 billion).
